

Tree and Woody Vegetation Control

Tree and Woody Vegetation Control is the Road Commission of Kalamazoo County's (RCKC) annual effort to contain roadside woody vegetation and overhanging tree branches that could obstruct motorists' vision, create drainage obstacles, or cause snow and icing problems if left unchecked.

For more information:
The Road Commission of
Kalamazoo County will be happy to
answer any further questions
or concerns.

Tree and Woody Vegetation Control

Removing Roadside
Hazards to Preserve
Roadway Safety

How is the program conducted?

The RCKC uses an integrated approach to control roadside woody vegetation and overhanging tree branches using:

- ◆ Hand Cutting
- ◆ Mechanical Devices
- ◆ Herbicides

Hand clearing and mowing are expensive and cannot be used safely in all areas. Specifically trained, licensed and experienced professionals selectively apply the herbicides to specific vegetation that could create a driving hazard. This spot spraying along local unplatted and primary roads is done on a rotating basis in one-quarter of the county late each summer. The operation is not a continuous broadcast spray—only those roadside areas where existing woody vegetation and limbs create safety hazards are sprayed.

How safe are the herbicides?

The Michigan Department of Agriculture & Rural Development (MDARD) licensed applicator chosen to perform the project for the RCKC in 2020 is FDC Enterprises, PO Box 189, New Albany, Ohio 43054 at 1-866-270-4833. FDC Enterprises applies Krenite S or Garlon 3A that are registered with the Michigan Department of Agriculture and Rural Development (MDARD) and the U.S. Environmental Protection Agency (USEPA).

A copy of the Safety Data Sheets are available at the RCKC's office or on the maintenance tab of the RCKC website.

Do I have a choice regarding the tree and woody vegetation control?

If owners would rather clear their own roadsides: Property will not be sprayed if owners have cleared the

woody vegetation, trees and limbs before the spraying program begins. Property owners may remove woody vegeta-

tion and low hanging limbs at minimum fourteen (14) feet up and fourteen (14) feet away from the traveled portion of the right-of-way (14 feet from the edge of the road) or with RCKC permission prior to the time frame specified by RCKC. If the roadside vegetation control efforts have not been accomplished within the permitted time frame, an application of an herbicide may occur. Property owners are encouraged to maintain their property abutting the road right-of-way by removing roadside woody vegetation and low hanging limbs in the time frame specified by RCKC for this activity only with the required permit application process.

Does the Road Commission really want property owners to assume responsibility for their own property?

The RCKC considers roadside maintenance a team effort and is pleased to have property owners as partners in this vital safety program. That's why the RCKC is eager to accommodate people who prefer to handle brush control themselves. This joint effort benefits both RCKC and the property owners.

How do I know if my area is targeted for spraying this year?

Approximately one-quarter of the county is sprayed annually, so a given area will only be sprayed once every three years.

Beginning August 3, 2020 Krenite S will be used in Oshtemo and Richland Townships and Garlon 3A will be used in Alamo, Cooper and Kalamazoo Townships on unplatted and primary roads.
