Weekly Project Updates

Sign up for RCKC CONNECT to receive message alerts for road construction, road closures/detours, and general public news from the Road Commission of Kalamazoo County website at: www.kalamazoocountyroads.com

#### Kalamazoo, MI-

In an effort to keep local drivers informed of the latest traffic and road maintenance operations by the Road Commission, we have provided the following update. For further information call 269-381-3170 or visit RCKC website www.kalamazoocountyroads.com.

"This information is made available to assist motorists in planning for construction delays," Travis Bartholomew, Managing Director of the Road Commission said. "Motorists are reminded to **be alert, slow down, stay informed, and be cautious when approaching a the work zone**. Remember, these projects signify progress in improving our infrastructure!"

Please note: This information is subject to change. Projects, road closures and timing can change from day to day, depending upon a number of factors, and traffic delays can develop in a matter of minutes due to weather conditions, emergency situations, etc.

#### 2025 Chip Seal Surface Treatment Route

CHIP SEAL is a surface treatment in which asphalt emulsion is applied to a pavement and then immediately covered with a single layer of aggregate. Chip seal is used to seal the surface of an existing pavement and improve surface friction. Rollers, street sweeping and traffic flow after a chip seal assists in compacting the aggregate. RCKC continues to monitor the quality of our product and the application rates for both the asphalt emulsion and the aggregate to reduce stone loss. Chip seal treatments remain the most cost-effective preventative maintenance treatment to preserve our infrastructure. It is common to have some stone loss, aggregate in lawns and tracking after the application is completed and potentially the following year.

FOG SEAL is a surface treatment in which asphalt emulsion is applied over the chip seal application, typically 1 - 2 weeks following the chip seal application. The fog seal assists in preventing initial deterioration of the surface, reduce crack filling in the future and extend the timeline for future chip seal applications. Not all chip seal surface treatments also include a fog seal application. Fog seal will cause some user delays based on cure time and weather impacts.

Anticipated start date is June 2, weather permitting. The RCKC advanced our chip seal program to a higher level by applying the first chip/fog seal treatment at the beginning stages of the HMA surface life (1-2 years after a new HMA surface is placed) for our primary network. Performing earlier applications of chip seal will protect and preserve the new HMA surface and prevent the initial deterioration of an HMA surface, which will also extend the timeline for future chip seal applications. Chip seal treatments performed at years 1-2 of age will also reduce the crack fill and HMA wedging costs due to improved surface condition and advanced preventive maintenance. Typically chip seal operations will not be conducted if there is a chance of rain. Chip seal is a moving operation and therefore specific dates for each area/road will be provided on RCKC Connect and on our Facebook page. Traffic delays should be minimal. For a more information on chip seal, including a video please visit: https://www.kalamazoocountyroads.com/chip\_seal.php
