## 2026 Chip Seal Surface Treatment Route

**CHIP SEAL** is a surface treatment in which asphalt emulsion is applied to a pavement and then immediately covered with a single layer of aggregate. Chip seal is used to seal the surface of an existing pavement and improve surface friction. Rollers, street sweeping and traffic flow after a chip seal assists in compacting the aggregate. RCKC continues to monitor the quality of our product and the application rates for both the asphalt emulsion and the aggregate to reduce stone loss. Chip seal treatments remain the most cost-effective preventative maintenance treatment to preserve our infrastructure. **It is common to have some stone loss, aggregate in lawns and tracking after the application is completed and potentially the following year.**

**FOG SEAL** is a surface treatment in which asphalt emulsion is applied over the chip seal application, typically 1 - 2 weeks following the chip seal application. The fog seal assists in preventing initial deterioration of the surface, reduce crack filling in the future and extend the timeline for future chip seal applications. Not all chip seal surface treatments also include a fog seal application. **Fog seal will cause some user delays based on cure time and weather impacts.**

Anticipated start date is May 16, weather permitting. The RCKC advanced our chip seal program to a higher level by applying the first chip/fog seal treatment at the beginning stages of the HMA surface life (1-2 years after a new HMA surface is placed) for our primary network. Performing earlier applications of chip seal will protect and preserve the new HMA surface and prevent the initial deterioration of an HMA surface, which will also extend the timeline for future chip seal applications. Chip seal treatments performed at years 1-2 of age will also reduce the crack fill and HMA wedging costs due to improved surface condition and advanced preventive maintenance. **Typically chip seal operations will not be conducted if there is a chance of rain. Chip seal is a moving operation and therefore specific dates for each area/road will be provided on RCKC Connect and on our Facebook page. Traffic delays should be minimal.
